About the Industry Competence Committee (ICC)

The Industry Competence Committee (ICC) is a statutory committee set up by the Building Safety Regulator (BSR) within the Health and Safety Executive. Set up as a statutory committee created under the Building Safety Act (2022), ICC will be concerned with the competence of those working in the built environment industries in England.

ICC will provide strategic leadership, alignment, momentum, assistance and encouragement, in support of its aim, to facilitate the improvement of competence in the built environment industry.

About the Industry Competence Steering Group (ICSG)

The Industry Competence Steering Group (ICSG) is a standing working group of the Industry Competence Committee (ICC) and cross industry forum. Set up in the wake of the Grenfell Tower disaster, the ICSG's purpose is enable everyone in the UK in the built environment industry to

access appropriate competences so they may safely contribute to the creation and use of built environments and can demonstrate their competence to others. It is not limited to responding to legislation: it is about keeping people safe.

The ICSG works through its sector led groups, which cover construction products, through to demolition and disposal, including in occupation, enabling culture change in relation to competence as well as collaboration and implementation across industry.
